AR-2 MECHANISM SERIES Specifications (IHF '78)

■ Cassette Deck Section

Deck system	Stereo cassette deck
Track system	4-track, 2-channel
Recording system	AC bias
Bias frequency	100 kHz
Erasing system	AC erase
Heads	
DECK 1	Playback head (Permalloy) × 1
DECK 2	Recording/Playback head (Permalloy) × 1
	Erasing head (Double-gap ferrite) × 1
Motors	
DECK 1, 2	Capstan drive (DC servo motor) × 1
Tape speed	4.8 cm/sec.
Wow and flutter	0.16% (WRMS)
Fast forward and rewind times	Approx. 110 seconds with C-60 cassette tape

Frequency response (Dolby NR off)

TYPE I (NORMAL)	20 Hz-16 kHz (DIN)
TYPE II (HIGH)	20 Hz-16 kHz (DIN)
TYPE IV (METAL)	20 Hz-16 kHz (DIN)

S/N (signal level = max recording level, TYPE II type tape)

NR off	56 dB (A weighted)
Dolby NR B on	66 dB (A weighted)

Input sensitivity and impedance

REC (IN)	400 mV/23 kΩ
----------	--------------

Output voltage and impedance

PLAY (OUT)	280 mV/360 Ω
------------	--------------

■ General

Dimensions (W × H × D)	270 × 118.5 × 269.5 mm
Weight	1.9 kg

Notes:

Specifications are subject to change without notice.

Weight and dimensions are approximate.

System	Tuner/sound processor	Compact disc player	Amplifier	Cassette deck	Front speakers	Center speaker	Surround speakers

■ OPERATION CHECKS AND MAIN COMPONENT REPLACEMENT PROCEDURES

NOTE

1. This section describes procedures for checking the operation of the major printed circuit boards and replacing the main components.
2. For reassembly after operation checks or replacement, reverse the respective procedures. Special reassembly procedures are described only when required.
3. Select items from the following index when checks or replacement are required.
4. Illustrated screws are equivalent to actual size.
5. Refer the parts No. on the page of "Main Component Replacement Procedures", if necessary.

● Contents

•Checking Procedure for each P.C.B.

	Page.
1. Checking for the main P.C.B. and power supply P.C.B..	3,4.
2. Checking for the operation P.C.B..	5,6.

•Main Component Replacement Procedures

1. Replacement for the cassette lid ass'y.	7.
2. Replacement for the cassette holder.	7.
3. Replacement for the motor ass'y, capstan belt and winding belt.	8~11.
4. Replacement for the plunger ass'y and the parts mounted on mechanism P.C.B..	11,12.
5. Replacement for the head block and pinch roller ass'y.	12.

■ Checking Procedure for each P.C.B.

1. Checking for the main P.C.B. and power supply P.C.B.

a (Black)

[RHD30007 - K1]

b (Black)

[XTBS3+8JFZ1]

• Check the main P.C.B. and power supply P.C.B. as shown below.

NOTE

Place the power supply P.C.B. on the insulation material not to short-circuit the solder side of power supply P.C.B..

(Black)

[XTBS3+JFZ1]

2. Checking for the operation P.C.B.

- Follow the **Step 1** ~ **Step 7** of the item 1 in checking procedure for each P.C.B. on pages 3 and 4.

- Step 5**
Remove the cassette lid ass'y in the direction of arrow.

 a (Black)

[XTB3+10JFZ]

 b

[XTBS26+10J]

Step 8

Remove the deck mecha frame in the direction of arrow.

Step 9

Remove the operation P.C.B..

Step 10

Connect the flat cable to the connector.

Step 11

Connect the socket (CN601B) to the connector (CN601A).

• Check the operation P.C.B. as shown below.

Step 12

Connect the lead wire

NOTE

Place the power supply P.C.B. on the insulation material not to short-circuit the solder side of power supply P.C.B..

■ Main Component Replacement procedures

1. Replacement for the cassette lid ass'y

- Follow the **Step 1** ~ **Step 3** of the item 1 in checking procedure for each P.C.B. on page 3.

2. Replacement for the cassette holder

- Follow the **Step 1** ~ **Step 5** of the item 1 in checking procedure for each P.C.B. on pages 3 and 4.
- Follow the **Step 1** ~ **Step 8** of the item 2 in checking procedure for each P.C.B. on pages 5 and 6.

■ Open spring installation

3. Replacement for the motor ass'y, capstan belt and winding belt

- Follow the **Step 1** ~ **Step 5** of the item 1 in checking procedure for each P.C.B. on pages 3 and 4.
- Follow the **Step 1** ~ **Step 4** of the item 2 in checking procedure for each P.C.B. on page 5.

NOTE

When removing the mechanism control P.C.B., remove it with holding the mechanism P.C.B. by finger.

NOTE

Handle the connector with care so that the shape of terminals different from others.

NOTE

The illustration below shows DECK2 mechanism. For DECK1 mechanism, perform the same procedure as DECK2.

C

[RHD26022]

Installing the belt

Step 4
Put the winding belt on the flywheel F.

NOTE

Take care not stick the grease on the belt.

NOTE

The winding lever should be positioned as shown below.

Step 6

Install the flywheel R.

Step 5

Install the winding lever and spring while pressing the winding arm in the direction of arrow.
(The winding lever must be inserted completely and latched with claws.)

Step 7

Put the capstan belt A temporarily as shown below.

(Side view)

Step 9 a × 3

Step 8

Install the sub chassis to the mechanism, and then tighten screws.

[XTV26+10S]

**Step 10**

Put the capstan belt on the motor ass'y pulley.

4. Replacement for the plunger ass'y and the parts mounted on mechanism P.C.B.

- Follow the **Step 1** ~ **Step 5** of the item 1 in checking procedure for each P.C.B. on pages 3 and 4.
- Follow the **Step 1** ~ **Step 4** of the item 2 in checking procedure for each P.C.B. on page 5.
- Follow the **Step 1** ~ **Step 3** of the item 3 in main component replacement procedures on page 8.

NOTE

The illustration below shows DECK2 mechanism. For DECK1 mechanism, perform the same procedure as DECK2.

**Step 3**

Release the 3 claws, and then remove the mechanism P.C.B..

[XYC2+JF17]

Step 4 Release the 4 claws.

Plunger ass'y
[RSJ0003]

NOTE

Notice for installing the plunger ass'y

- The shaft of plunger ass'y should be aligned with the slot of lever.

5. Replacement for the head block and pinch roller ass'y

- Follow the **Step 1** ~ **Step 5** of the item 1 in checking procedure for each P.C.B. on pages 3 and 4.
- Follow the **Step 1** ~ **Step 4** of the item 2 in checking procedure for each P.C.B. on page 5.
- Follow the **Step 1** ~ **Step 3** of the item 3 in main component replacement procedures on page 8.

NOTE

The illustration below shows DECK2 mechanism. For DECK1 mechanism, perform the same procedure as DECK2.

Step 1

Release the 2 claws, and then remove the pinch roller ass'y (R),(F).

[Head block
DECK1 : RED0038
DECK2 : RED0037]

Step 3

Release the 2 claws, and then remove the head connector.

[XTW2+5L]

■ Service Mode Function of Cassette Mechanism

This unit is equipped with a service mode function of cassette mechanism using the LED indicators [R. PLAY (◀), F. PLAY (▶)] and cassette holder illuminations [DECK 1, DECK 2]. Use this function during maintenance to check faults of the items below.

● Cassette tapes to be prepared

- Metal tape: Recorded music tape with only one erase-prevention tab intact (use middle portion of tape).
 Normal tape: Recorded music tape with both erase-prevention tabs intact (use middle portion of tape).
 CrO2 tape: Recorded music tape with both erase-prevention tabs intact (use middle portion of tape).

● Selecting Service Mode

1. Turn on the power to the unit. (If RS-CH770 unit is removed from system, turn it on according to the procedure on page 15.)
2. Check that no tape is inserted in the cassette deck.
Press the DOLBY NR button for about 2 seconds, and keep pressing it, also press the STOP button for about 2 seconds. (Service mode cannot be selected with a tape inserted in the cassette deck.)
3. The LED indicator for REC PAUSE flashes, the service mode has been activated.

● Deck 1 Mechanism Check

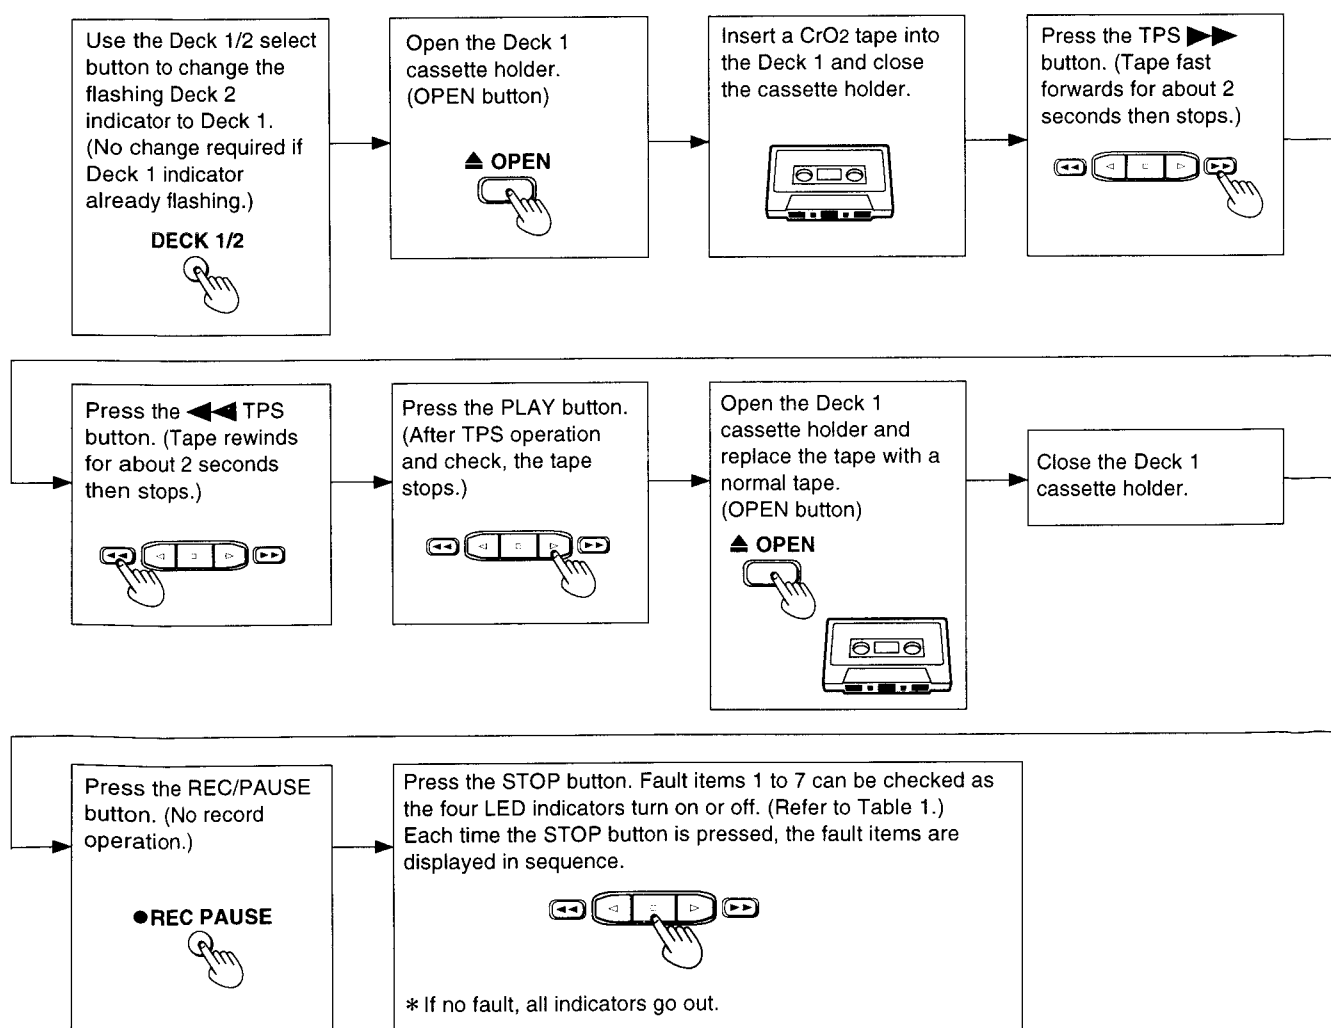

Table 1: Service Mode Diagnostic Items

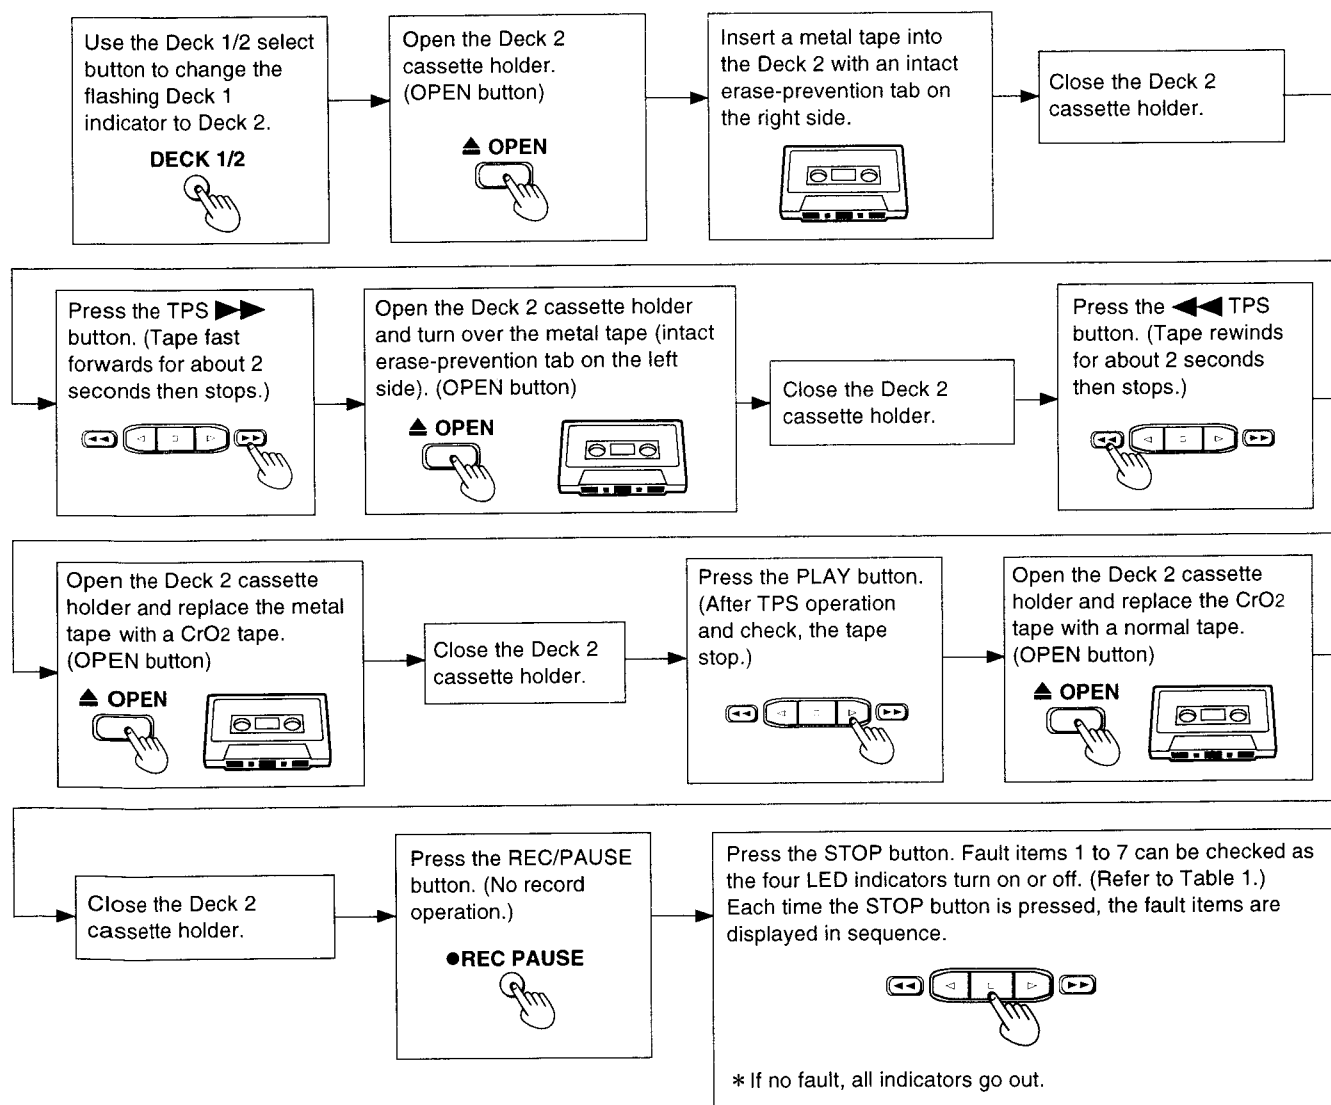

No.	LED indicator and illumination status (on/off)				Fault location
	◀	▶	DECK 1	DECK 2	
1.	—	—	—	●	MODE detect switch
2.	—	—	●	—	REC prevention switch
3.	—	—	●	●	Half detect switch
4.	—	●	●	—	CrO ₂ tape detect switch
5.	—	●	●	●	Metal tape detect switch
6.	●	—	—	—	Reel pulse detect system (Hall IC, etc.)
7.	●	—	—	●	TPS operation

Notes:

“●”: ON

“—”: OFF

* If no fault, all indicators go out.

• Deck 2 Mechanism Check**• Exiting Self-Check Mode**

1. Press the STOP button for more than 6 seconds. (Diagnostic contents stored in memory for both Deck 1 and 2 are erased.)
2. Remove the cassette tape from the cassette holder.
3. Turn off the unit.

Measurements and Adjustments

This unit RS-CH770 is designed to operate on power supplied from the Amplifier (SE-CH570 or SE-CH770) through Tuner/Sound Processor (ST-CH570 or ST-CH770).

When connecting the unit to other system components, do not connect to the Amplifier (SE-CH570 or SE-CH770) directly. Be sure to connect this unit through the Tuner/Sound Processor (ST-CH570 or ST-CH770).

When operating the unit RS-CH770 alone for testing and servicing, without having power supplied from the Amplifier (SE-CH570 or SE-CH770) and the Tuner/Sound Processor (ST-CH570 or ST-CH770), use the following method.

● To Supply Power Source

Apply 11 V AC power to test points between **TP601** and **TP602** (GND), and **TP603** and **TP602** (GND).

Notes: When operated alone, this unit automatically enter the TEST mode, causing either the DECK1 or DECK2 indicators to blink.

In TEST mode, please make sure whether the Dolby B indication is on or off by the illumination of DECK 1 cassette holder is lighted on or off. (DECK 1 illumination is lighted on: Dolby ON, illumination is lighted off: Dolby OFF)

● To Check Signals

Connect an oscilloscope or a built-in amplifier speaker between line output for L-ch (**TP607**) and **A.GND**, and line out for R-ch (**TP608**) and **A.GND** and check if the signals are outputting from this unit.

Fig. 2

Measurement Condition

- Dolby NR switch; OFF
- Make sure heads are clean.
- Make sure capstan and pressure roller are clean.
- Judgeable room temperature $20 \pm 5^\circ\text{C}$ ($68 \pm 9^\circ\text{F}$)

Measuring instrument

- EVM (Electronic Voltmeter)
- AF oscillator
- Digital frequency counter

Test tape

- Head azimuth adjustment (8 kHz, -20 dB); QZZCFM
- Tape speed adjustment (3 kHz, -10 dB); QZZCWAT
- Playback gain adjustment (315 Hz, 0 dB); QZZCFM
- Recording/playback frequency response adjustment; QZZCFM (315 Hz/0 dB, 315 Hz/-20 dB, 12.5 kHz~63 Hz/-20 dB)
- QZZCRA (Normal blank Tape)
- QZZCRX (CrO₂ blank Tape)
- QZZCRZ (Metal blank Tape)

HEAD AZIMUTH ADJUSTMENT (DECK 1/2)

1. Connect the measuring instrument as shown in Fig. 3.
2. Replace azimuth screws for both forward and reverse direction after removing the screw-locking bond left on the head base.
Fine adjustment of azimuth can not be performed with remaining the bond on the head base.
(Supply part No. of azimuth adjusting screw: **RHD17015**)
3. Playback the azimuth adjustment portion (8 kHz, -20 dB) of test tape (QZZCFM). Adjust the azimuth adjusting screw until the outputs of the L/R-ch are maximized. (Refer to Fig. 4.)
Make sure that the difference in the peak level between the left and right channels does not exceed 0.5 dB.
4. Perform the same adjustment in reverse playback mode.

Check of the level difference forward and reverse directions

5. Playback the playback gain adjustment portion (315 Hz, 0 dB) of test tape (QZZCFM). Check if level difference between forward and reverse direction is within 1.5 dB.
6. After the adjustment, apply screwlock to the azimuth adjusting screw.

Fig. 3

Fig. 4

TAPE SPEED ADJUSTMENT (DECK 1/2)

Note: When connecting the unit to other system components for testing, short the section between the test points **TP609** and **TP604** and turn on the entire system. (The unit is set to the TEST mode, and either the DECK1 or DECK2 indicators will blink.)

Normal speed (Standard value: 3000 ± 45 Hz)

1. Playback the middle portion of the test tape (QZZCWAT).
2. Adjust Deck 1 = **VR801** and Deck 2 = **VR803** for the output value shown below. (Refer to Fig. 2)

Adjustment target: 3000 ± 15 Hz (NORMAL speed)
Standard value: 3000 ± 45 Hz (NORMAL speed)

High speed [Set the unit to forward (FWD) mode.]

3. Playback the middle portion on the test tape (QZZCWAT).
4. Press the one touch tape edit (High) button.
This will set the high speed mode.
5. At that time, check if the output from DECK 1 is within the standard value.

Standard value: 5000 ± 600 Hz (HIGH speed)

6. Adjust **VR802** so that the output frequency of DECK 2 is within ± 30 Hz of the value of the output frequency of DECK 1. (Refer to Fig. 2.)

Note: When connecting the unit to other system components, disconnect the short between the test points **TP609** and **TP604**.

Fig. 5

PLAYBACK GAIN ADJUSTMENT (DECK1/2)

1. Find the start of the 315 Hz/0 dB section of the test tape (QZZCFM), insert the tape into Deck1 and 2, and play it back (FWD)
3. Adjust Deck 2 : **VR102** (L-ch) [**VR103** (R-ch)] and Deck 1 : **VR104** (L-ch) [**VR101** (R-ch)] so that the output is within the standard value. (Refer to Fig. 2.)

Standard value : 280 mV ± 15 mV

Fig. 6

ERASE CURRENT CONFIRMATION (DECK2)

1. Insert the blank tape into Deck2, and press the REC PAUSE button.
3. Check if the output at this time between the erase current confirmation point **TP301** and **TP302** (the output on both edged of R313) is within the standard value. (Refer to Fig. 7.)

Standard value	EVM reading
Normal tape : 85 ± 25 mA	(85 ± 25 mV)
CrO2 tape : 150 ± 25 mA	(150 ± 25 mV)
Metal tape : 185 ± 25 mA	(185 ± 25 mV)

Note: The test tape is not required when confirming the erase current.

Fig. 7

Playback frequency response check (DECK 1/2)

Playback the 315 Hz/-20 dB and 12.5 kHz to 63 Hz/-20 dB sections of the test tape (QZZCFM) and then, using the 315 Hz/-20 dB playback output as a reference (0 dB), confirm that the playback frequency response is within the range shown in Fig. 9.

Fig. 8

Fig. 9

Recording/playback frequency response and gain check (DECK 2)

Normal tape check

1. Insert a Normal-type blank tape (QZZCRA) into Deck 2.
2. Record signals at 50 Hz, 100 Hz, 200 Hz, 500 Hz, 1 kHz, 2 kHz, 10 kHz and 12.5 kHz (28 mV).
3. Set the playback frequency of the recorded signals at 1 kHz as the reference response (0 dB).
4. Playback the recorded signals to confirm that the output is within the range of the overall frequency response shown in Fig. 11.

CrO₂/Metal tape check

5. Repeat steps 2 to 4 for each tape and confirm that the output for each is within the range of the overall frequency response shown in Fig. 12.

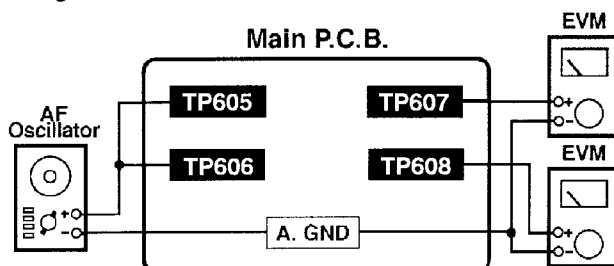

Fig. 10

Normal Overall frequency response chart (NR OFF)

Fig. 11

CrO₂ Metal Overall frequency response chart (NR OFF)

 - **VR802** : DECK 2 tape speed adjustment (high)
 - **VR803** : DECK 2 tape speed adjustment (normal)
- Indicated voltage values are the standard values for the unit measured by the DC electronic circuit tester (high-impedance) with the chassis taken as standard. Therefore, there may exist some errors in the voltage values, depending on the internal impedance of the DC circuit tester.

No mark : Playback () : Recording

• Important safety notice:

Components identified by ▲ mark have special characteristics important for safety. Furthermore, special parts which have purposes of fire-retardant (resistors), high-quality sound (capacitors), low-noise (resistors), etc. are used. When replacing any of components, be sure to use only manufacturer's specified parts shown in the parts list.

• Caution!

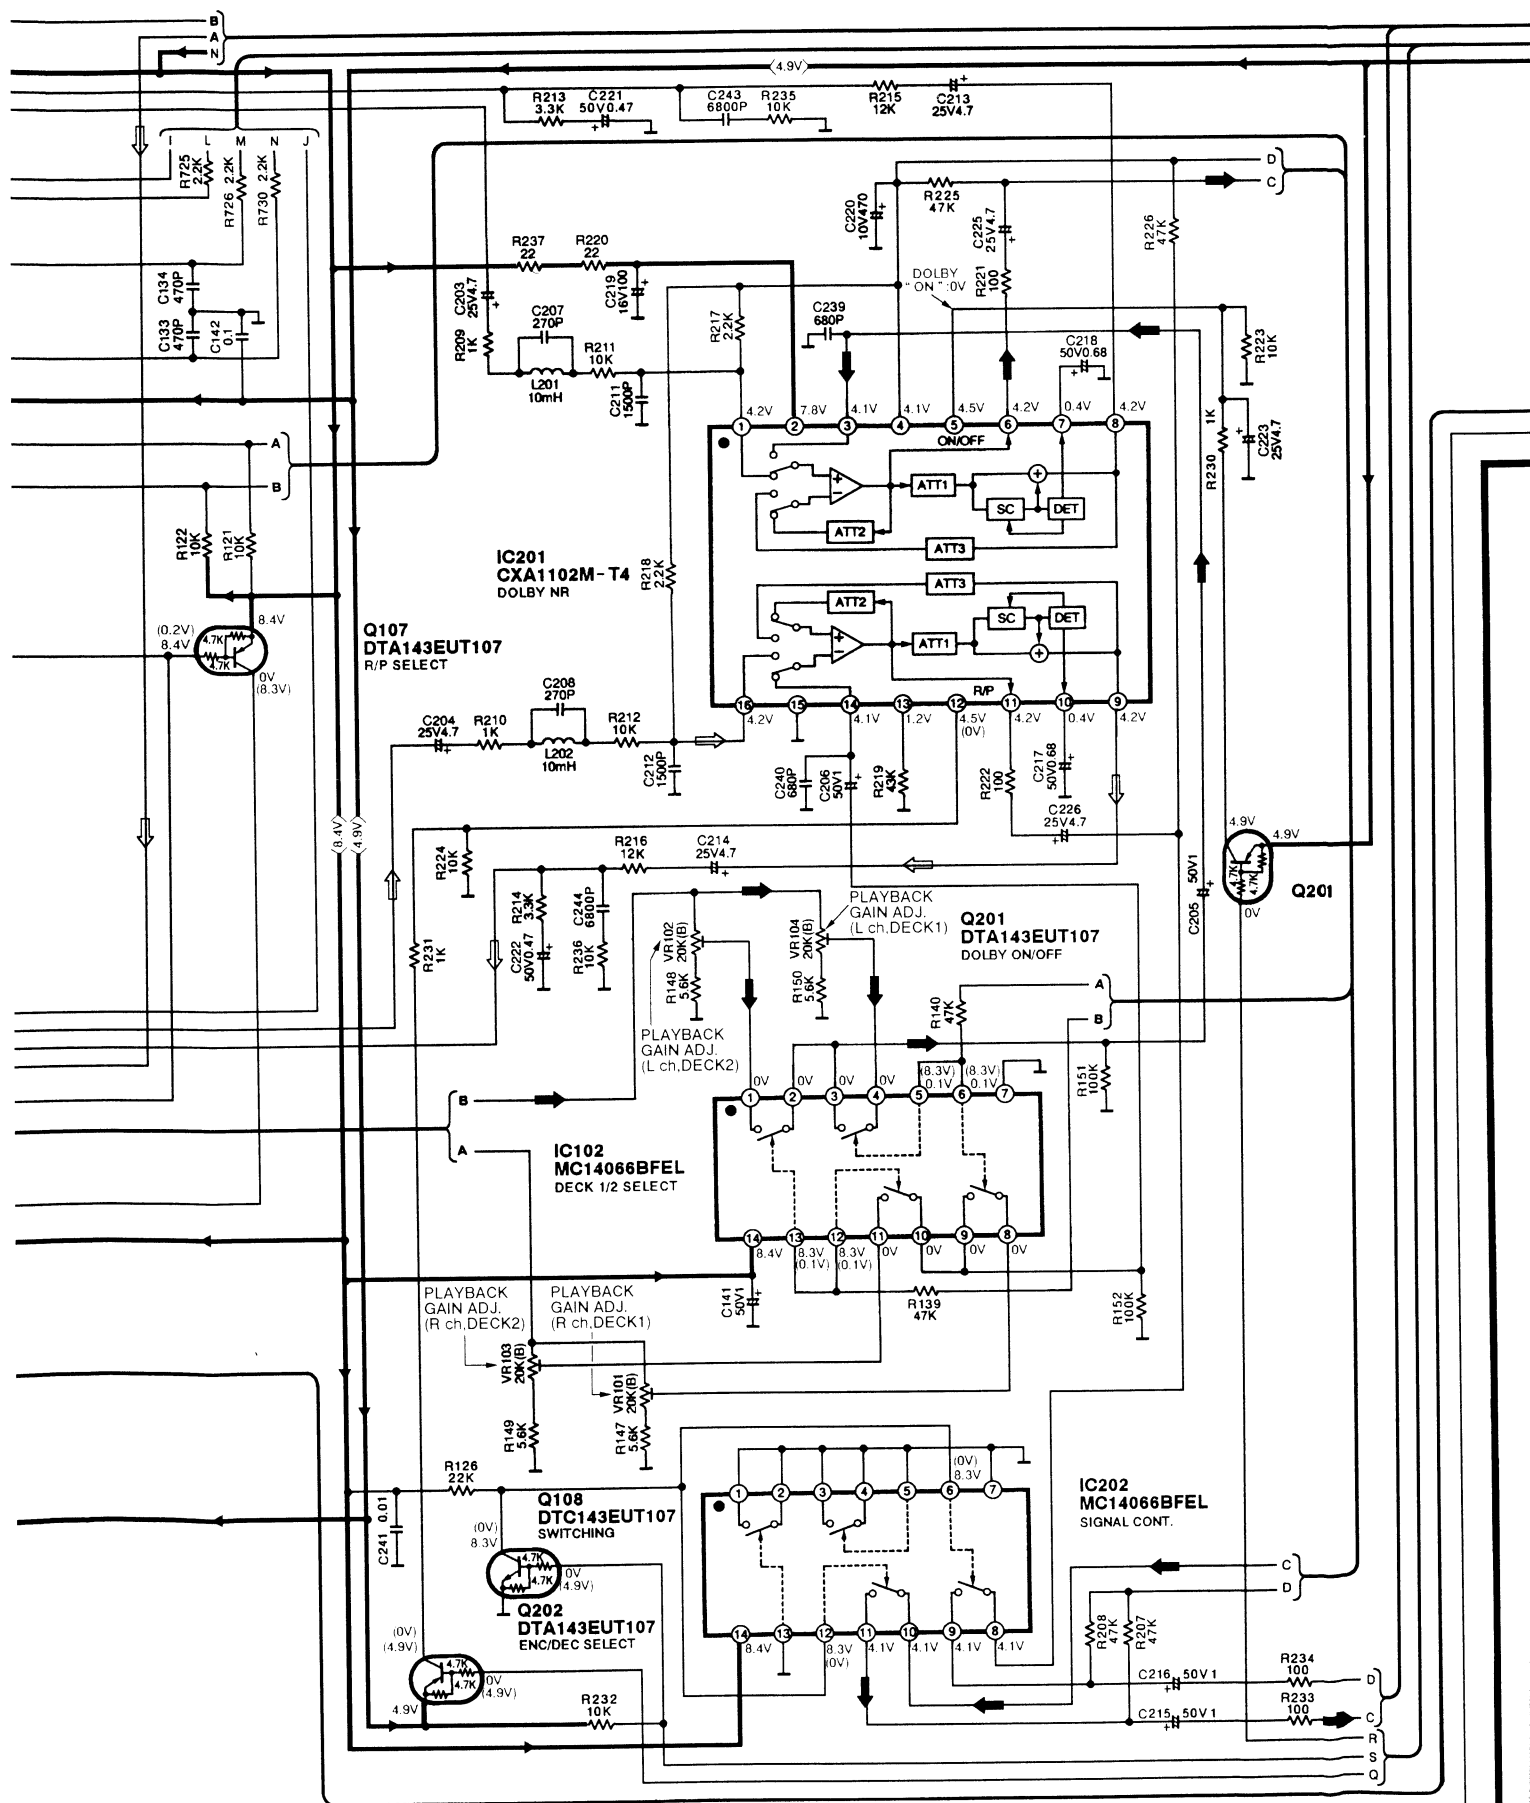

IC and LSI are sensitive to static electricity.
Secondary trouble can be prevented by taking care during repair.
Cover the parts boxes made of plastics with aluminum foil.
Ground the soldering iron.
Put a conductive mat on the work table.
Do not touch the legs of IC or LSI with the fingers directly.

56	N.C.	—	Not used

Block Diagram

■ Replacement Parts List

Notes: *Important safety notice:

 Components identified by Δ mark have special characteristics important for safety.

Furthermore, special parts which have purposes of fire-retardant (resistors), high-quality sound (capacitors), low-noise (resistors), etc. are used.

When replacing any of components, be sure to use only manufacture's specified parts shown in the parts list.

*The parenthesized indications in the Remarks columns specify the areas. (Refer to the cover page for area.)

Parts without these indications can be used for all areas.

* [M] Indicates in Remarks columns parts that are supplied by MESA.
